Primary Examiner, Art Unit 3634

1. The following is an examiner's statement of reasons for allowance:

The language of claim 1 setting forth "the flange is arranged for releasable retention between a beading and/or gasket and a glass pane " which by comparing the arrangement of the flange with that of the beading, gasket, and glass pane sets forth that the beading, gasket, and glass pane are positively claimed elements of the frame system. The language of claim 1 setting forth "the engaging member being configured to releasably engage a cooperating receptacle in the frame" which by comparing the configuration of the engaging member with that of the cooperating receptacle in the frame sets forth that the cooperating receptacle is a positively claimed element of the frame system. The prior art of record does not disclose nor fairly suggest a frame system securing a window blind to a window comprising a flange disposed between a beading, gasket and a glass pane in conjunction with the frame having a cooperating receptacle with the engaging member disposed therein.

The language of claim 20 setting forth "the window blind frame having first and second projections" which by defining the structure of the window blind frame sets forth that the window blind frame secured to the window casing are positively claimed elements of the kit for making a window blind frame system. The language of claim 20 setting forth "a flange and a support extending substantially orthogonally from the flange generally along a support frame" which by comparing the orientation of the flange and support with that of the support frame sets forth that the support frame is a positively claimed element of the kit for making a window blind frame system. The language of claim 20 setting forth "the flange is arranged for releasable retention between the window casing and a pane of a window" which by comparing the arrangement of the flange with that of the window casing and a pane of a window sets forth that the window

casing and the pane of a window are positively claimed elements of the kit for making a window blind frame system. The language of claim 20 setting forth "at least one engaging member configured to releasably engage a cooperating receptacle in the window blind frame" which by comparing the configuration of the engaging member with that of the cooperating receptacle in the window blind frame sets forth that the cooperating receptacle in the window blind frame is a positively claimed element of the kit for making a window blind frame system. The prior art of record does not disclose nor fairly suggest the claimed structure of the frame-securing clip which has secured the window blind frame to the window casing, the orientation of the support frame with that of the flange and support, the window casing and the pane of a window having retained therebetween the flange, and the cooperating receptacle in the window blind frame having engaged therewith the engaging member.

Claim 65 is a method claim wherein each recited element is intrinsically encompassed by the method including that of inserting the flange of the clip between a beading, a gasket of the window casing, the glass pane, and engaging the window blind frame with at least one engaging member all of which is not disclosed nor fairly suggested by the prior art of record.

The language of claim 71 setting forth "a flange releasably inserted between a beading and/or gasket of the window casing and a glass pane" which by specifying the insertion of the flange in relation to the beading, gasket, and glass pane sets forth that the beading, gasket, and glass pane are positively claimed. The prior art of record does not disclose nor fairly suggest the claimed window casing including a window blind frame secured thereby in conjunction with the securing clip having a flange inserted between a beading, gasket and a glass pane.
